

Onsite PSA Tests

Pricing:
£1,295 per day
for 30 PSA tests

A PSA Test measures the amount of prostate specific antigen (PSA) in the blood.

How do we test?

We take a small sample of blood from your finger, which is sent to our lab for analysis. You will then receive your results within 10-14 days.

Who is the test available to?

The test is available to those over the age of 45, who have a family history of prostate cancer, or if you are showing symptoms of a potential prostate problem.

What are the advantages of a PSA Test?

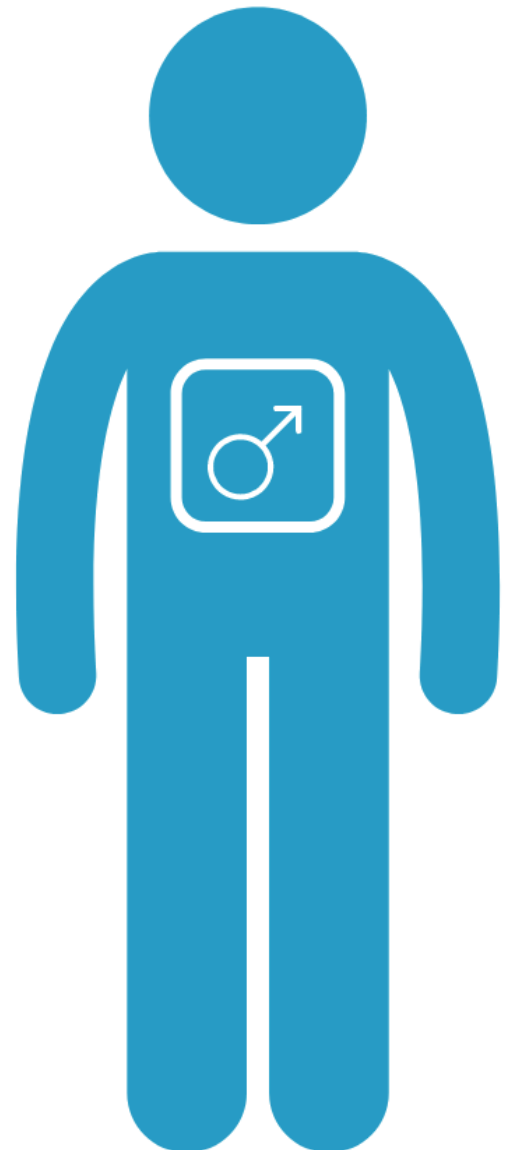

It can help detect prostate cancer before you have any symptoms. If you have an increased risk of prostate cancer it can monitor any unusual increased in your PSA levels that could suggest early signs of prostate cancer.

Did you know?

Early detection has shown **80%** of prostate issues are treated with no long term impact.

Prostate cancer is the **most common** cancer in men.

More than **52,000** men are diagnosed with prostate cancer every year on average - that's **144** men every day.
